PROFILE

Full-stack developer (React, Next.js, Node.js, NestJS) with ~2 years building production web apps, Shopify integrations, and AI-powered automation tools. Comfortable owning a project end-to-end — architecture, backend, frontend, and third-party API integration — and has also led client acquisition, pricing, and product strategy in a startup setting. Recently building AI agent systems (Gemini, autonomous scraping/scoring pipelines) on top of a strong full-stack foundation.

SKILLS

Language – JavaScript, TypeScript

Frontend Development – React, Next.js, Redux/Zustand, Tailwind CSS, ShadCN, MUI, Vite

Backend Development – Node.js, Express, NestJS, REST APIs, WebSockets

Database & Storage – MongoDB, MySQL, Prisma ORM

eCommerce Platforms – Shopify Store Development, Shopify API Integrations, Custom Business Management Apps

Platforms & Tools – Shopify (Storefront + Admin API, webhooks), Git, Apify

EXPERIENCE

Technical Lead – Product & Growth — Asterixz Infotech

Mar 2026 – Jul 2026

- Led the full client lifecycle end-to-end: outreach and sales conversations through to converting prospects into signed engagements.
- Owned product and business strategy — pricing plans, product ideation, and go-to-market approach — alongside technical architecture for client-facing products.
- Designed, developed, and deployed products including Nexus (AI trend intelligence & outreach engine), Nexara (autonomous product validation engine), and several client Shopify stores.
- Operated as a generalist across business development and hands-on engineering — a hybrid scope beyond a typical developer role.

Full Stack Developer — Oftgen Infotech

Nov 2025 – Feb 2026

- Built and shipped Auco (AI code-generation platform), Appy (Gemini + chatbot platform), Leadingly (voice-to-diagram tool), and Codium (design/code workspace) as a full-stack developer.
- Worked across frontend, backend, and AI/LLM integration (Gemini) for each product.
- Learned AI integrations and rapid product development using vibe coding methodologies.

Full Stack & Shopify Developer — Independent / Freelance

May 2025 – Nov 2025

- Built and shipped custom Shopify stores end-to-end — theme customization, checkout/payment flow configuration, and UX improvements — for multiple small-business clients.
- Designed and built a custom eCommerce management web app (order tracking, inventory, automated customer notifications) that let non-technical business owners replace manual/spreadsheet-based workflows.
- Integrated Shopify Admin/Storefront APIs with backend systems for real-time, bidirectional order and product sync, removing manual reconciliation between storefront and internal systems.
- Owned each freelance engagement end-to-end: client requirements, architecture, development, and deployment.

- Built and optimized scalable web applications across the stack using React/Next.js on the frontend and Node.js/NestJS on the backend.
- Implemented real-time data features using WebSockets for live-updating dashboards/data systems.

React.js Intern — Dot3 Solutions

Dec 2023 – Jun 2024

- Built and optimized scalable web applications across the stack using React/Next.js on the frontend and Node.js/NestJS on the backend.
- Implemented real-time data features using WebSockets for live-updating dashboards/data systems.

PROJECTS

Nexara — Autonomous AI Trend Intelligence & Product Validation Engine — Asterixz Infotech · React · Node.js · AI Pipeline

Automated e-commerce intelligence platform that discovers viral products on TikTok, extracts product details via a multi-tier AI pipeline, and validates supplier margins and ad competition in real time — replacing manual product research with a scored, data-driven pipeline for high-margin product opportunities.

Nexus — AI Trend Intelligence & Outreach Engine — Asterixz Infotech · React · Node.js · AI Agents

Full-stack AI platform that turns business services into targeted go-to-market strategies: discovers high-opportunity cities/industries, deploys AI agents to gather business intelligence, ranks prospects via intelligent scoring, and executes automated, AI-personalized day-wise outreach campaigns.

Ecommerce Order Management System — React · Node.js · Shopify API

Automated order management system with Shopify order imports, a 3-step delivery follow-up/confirmation flow, smart courier assignment, and end-to-end tracking from pickup to delivery or return and NDR management.

Import Business Management System — Dot3 Solutions · Next.js · Node.js

Developed an import business management system for Maxzope, encompassing features for ordering, container management, and warehouse operations. The system supports sales management, comprehensive reporting, and stock maintenance to streamline logistics and inventory control.

Other projects (Accounting Management System, Garment Costing Calculator, Real-Time Stock Market Analytics, AUOCO (AI-assisted code generation platform), Appy (Chatbot Platform), Codium (Design/Code Workspace), Leadingly (Voice-to-Diagram Generator), WealthBook).

EDUCATION

Masters of Business Administration

July 2024 - Present

Parul University

Bachelor of Science in Information Technology

2021 - 2024

Sarvajanic University
